

A SELECTIVE DELEUKOCYTATION UNIT  
FOR A PLATELET PRODUCT

ABSTRACT

The invention includes a filtration unit for the  
5 selective deleukocytation of a fluid containing blood  
platelets such as blood or a blood component. The unit  
includes a medium for deleukocytation by adsorption  
and/or filtration of the leukocytes. The medium is  
formed by at least one layer of non-woven polyurethane  
10 fabric which has been treated by gas plasma.

The invention also includes bag systems containing  
such a unit, including closed filtration systems.
